

Capstone Project-The Battle of Neighbourhoods (Part 1)

Data Section:

To solve the problem of finding the best neighbourhood in Toronto to open up a new venture of a Thai Restaurant, we will need the following data:

- List of neighbourhoods in Toronto, Canada:

Data source: Wikipedia

Description: Scrapping the data from Wikipedia as done in past week.

- Latitude and Longitude:

Data source: Geocoder package

Description: Obtaining the latitude and longitude values of the neighbourhoods using this package

- Venue of Thai Restaurants:

Data source: Foursquare API

Description: Getting the venue data that have Thai restaurants so we choose the best location for our new venture
